

GOAL

The goal of the game is to gather as much high value treasure as possible!

At the end of the game, add up the poko value of each treasure card you've successfully returned to base, and see who has the most!

The game ends when 3 days have gone by. A day goes by when the day tracker reaches the end, and resets to the beginning.

(Other day amounts possible, 3 is just for testing)

SET UP

Create a pile of treasure cards on each treasure space by placing cards from the top of the treasure deck face up until the total poko value of all the cards in the pile meets or exceeds 500p

Lay enemy cards face up on all enemy spaces on both sides of the board, if a boss monster is drawn, put it on top of the pile showing highest cost treasure and continue filling spaces. (If there are no more treasure piles without bosses, shuffle the boss back into the enemy deck and continue)

Put 1 pikmin token of each of the 3 basic colors in each players HOME. the basic colors will vary depending on the scenario you choose.

After that, choose who goes first, and take your first turn.

TURN

Gather Phase

Remove any sprays placed by you the previous turn that are still on the board

First turn you get 3 gather actions, subsequent turns only two-

Exchange a gather action for either a draw from the gather deck or a roll of one pellet die

Orders Phase

Move the pikmin on the board around freely and assign them to different spaces. They can only go to spaces that are either past hazards they are immune to, or are the enemy furthest from the center. Anything on the board will stop you from going further until it is cleared.

In this phase, pellets can also be played in exchange for pikmin tokens.

YOU MAY ONLY EVER HAVE 25 PIKMIN TOKENS ON THE BOARD AT A TIME.

If you wish to add more but already have 25, you are free to discard pikmin tokens you control at any time. Any extra you WOULD get from a pellet card that goes over the limit, is simply wasted.

Move Phase

After giving orders, but before those orders resolve is the only time you may play gather cards. The exception to this is if the card mentions a specific time frame for activation, or says "play at any time"

Once pikmin have their orders and any item cards have been played they resolve those orders. Everything they do is known as a "move". Moves are resolved in the following order:

- 1st they move any treasure they are holding that is free to do so one space
- 2nd they do damage to any enemies they are attached to
- 3rd they take damage from any enemies that aren't dead yet

When an enemy dies, its reward is rolled or drawn immediately.

Once all 3 of these steps are done, discard cards until you have only 10 left and then play passes to the next player.

CARD TYPES

TREASURE

Treasure cards start in the middle of the board and must be returned to your side by pikmin in order to collect them.

Treasure cards appear in piles, but act as one treasure. Refer to the treasure that is showing on top of the pile for what values to use when carrying it!

In order to move a treasure you must

- A) have enough pikmin to match or outnumber the weight in the bottom right corner AND
- B) have more pikmin on the treasure than your opponent.

If both players have the same number of pikmin on a treasure, it doesn't move anywhere! There is a carry stalemate!

Stalemates can only be broken with an Ultra-Spicy Spray (which allows you to move it a space in spite of a stalemate) or by somehow discarding your opponent's pikmin.

NOTE: most pikmin have a carry strength of 1, but some types may be worth more. The total carry strength is what is important to beat ties and carry treasure.

PELLETS

Any time a defeated enemy's reward shows pellets, or any time you would otherwise draw a pellet card where the color isn't specified, roll a pellet die. Take cards equal to the color and value shown on the die (red 1, blue 5, etc). Pellet cards can be redeemed for their own type of pikmin, or slightly less of another type during your "Orders" phase (see TURN above)

ENEMIES

Enemy cards spawn at the beginning of the game, and at the start of every day (unless otherwise specified by the scenario). They consist of the following elements:

Elements

Enemy cards have two elements on them, the one in the top left corner by the name is their "attack element", and the one next to their health is their "defense" element. Not all enemies have elements, and some elements act differently to normal elements. (see COMBAT - ELEMENTS)

HP and Damage

There are two numbers in the top right corner of the card, HP in a big green or yellow circle, and Damage in a red circle. The HP is how much damage a monster must take before it dies. HP loss persists between turns. Damage is the amount of pikmin tokens it discards when it attacks.

Rewards

At the bottom of the card is a box containing the list of rewards. When an enemy dies you receive the rewards listed here (see COMBAT - REWARDS)

Ability

Some enemies have another box above their rewards box containing an ability. This usually has some extra requirement that needs to be fulfilled in order to do damage to it, such as having a specific type of pikmin, but can also include what happens when it dies. (e.g. the dweevil enemies drop hazards of their type when they die)

Bosses

If an enemy card is a boss, the HP circle will be gold instead of green, and the text "BOSS" will appear above it. These are shuffled in with the regular enemies but have specific spawn requirements. (See SET UP)

DAY TRACK

Every time it returns to the first player's turn the day counter advances one space, and its event (if any) is resolved. For this test this is just enemies respawning in the first phase.

At the end of a day, when the day track resets, all empty enemy spaces are refilled and enemies that are still on the board have their health reset to full. All pikmin tokens are returned to their respective homes, and then play continues. Treasure is not moved.

If an enemy would spawn on a space where there is a treasure, and it is not a boss, skip it. The treasure takes priority and does not move between days.

SPACES/LANES

A space is "empty" if it has no card on it. Pikmin do not make a space no longer empty.

If an enemy is spawned on top of pikmin, or if a treasure appears where pikmin are standing, they are automatically "attached" to the enemy or treasure, although they do not start resolving their interaction until their next action

(I.E. if you use a spicy spray, and then kill a boss with your first action, the pikmin will start moving it one space with their second action.)

A lane counts as "clear" if there are no cards between you and the treasure. Pikmin do not make a lane no longer clear, and neither do hazards that exist on the map, but hazard cards do.

Spaces are on "your side" if they are the treasure space, or the 3 spaces of a lane that you would traverse to get to it from your side of the board. The treasure space always counts as both player's "side" for the purposes of cards such as Oatchi Rush.

If a space has a hazard, it can only be entered by pikmin immune to that hazard, with the

exception of height. If a space has a height hazard it can only be entered by height-immune pikmin when travelling towards the treasure space, but can be exited by any (and any type can exist on it if you candypop bud them there). Think of it as a one-way cliff that any pikmin can fall off of, but only yellows can “climb”.

If a pikmin is “spawned” on a space with a hazard it cannot exist on, it dies immediately.

If a hazard is “spawned” on a space with pikmin that cannot exist on it, they do not die until their next action.

If a space has a poison hazard, groups of pikmin take 1 damage (per colour) from the space per turn when exiting the space. This is known as “passing” the space. They also take the damage when existing on the space for their turn without moving.

A space is not “passed” if it is moved by a card effect to the other side of it. So Oatchi Rush would not affect the health of a bridge if it takes pikmin with it.

SPRAYS

Ultra Spicy Spray and Ultra Bitter Spray are applied to a space when played

DISCARD THE CARD WHEN IT IS PLAYED. Simply apply a token to the space, the token is discarded when the extra move is used or a move is skipped (in the case of bitter spray)

Bewilder Bomb - Bewilder Bomb is a special card that applies a token to an enemy. This token is not removed until the enemy dies, but only one Bewilder token can be on the board at one time.

If you place a bewilder bomb on an enemy and one already exists on the board. Remove the one that is there and move it to the new one, that enemy has its elements back

COMBAT

On an enemy card is two numbers in the top right, these are the damage it deals (shown in a red circle), and the health it has (shown in a green or yellow circle).

in the move phase of every turn, it loses health equal to the total carry strength of pikmin on its space. and then kills an amount of pikmin equal to its damage. It does not kill any pikmin if it dies that turn.

NOTE: the amount of pikmin a monster kills is an amount of *tokens* equal to its damage, not a *carry strength* equal to its value. A purple can do 5 damage to an enemy on its own, but only satisfies one point of damage done to the pikmin in turn!

BOSSSES

Boss monsters are special monsters. Whenever they are drawn while refilling monster spaces, they instead are placed on a treasure in the middle of the board, and then another monster is drawn to continue filling spaces on the board. That treasure cannot be collected until it is defeated.

When a boss monster is drawn place it on top of the treasure pile that is showing the highest value treasure. It stays there until moved or defeated, even if the pile is changed.

When a boss is defeated, any pikmin left on the space are automatically carrying the treasure it dropped, although they cannot move it until the next move phase unless they still have a spare action from an ultra spicy spray.

ELEMENTS

Some enemies have hazard markers next to their name. This denotes that they are more dangerous, as they have some special way they must be handled.

If the marker is for an elemental type (fire, water, electricity, ice, etc), the monster is unable to kill pikmin of the type immune to their hazard. (e.g. red pikmin cannot be killed by fire hazard enemies).

If the marker is for the Crush hazard (a box with a down arrow), then it does its full damage every turn, even if it dies that turn. Rock pikmin do not take damage from enemies with a crush element.

If the marker is for Speed, the monster's attack phase comes before the pikmin's attack phase, they do their damage before taking any from pikmin.

If the marker is for Explosive, the monster attacks all pikmin on 5 spaces in a + formation centered on it. Monsters with an explosive type can attack pikmin from a space away, even if no pikmin are actively attacking it. Be mindful when attacking monsters adjacent to an explosive monster.

Next to the health marker for an enemy is another element marker. This element shows some kind of natural defense the enemy has developed such as combustible slime.

Any pikmin attacking this enemy will die after attacking it if it is not immune to the element shown here, but will still do its damage.

The exception to this rule is the following elements:

Crush: These creatures can only be harmed by things capable of breaking their thick outer shells, such as Rock pikmin.

Height: These creatures can only be harmed by things capable of reaching up high. Pikmin capable of clearing height hazards can attack these enemies.

REWARDS

When an enemy is killed its reward is released. Roll an amount of pellet dice equal to the number of “pellet” icons present, and draw gather cards equal to the number of gather icons.

ENEMY RESPAWNING

Enemies may respawn as the result of a gather card, boss or treasure effect, or a midday event on the day tracker.

When enemies respawn, refill all enemy spaces as you would for the start of game setup, unless the effect says otherwise.

If any enemy would appear on a space where there is already a card (such as a hazard or a treasure being carried in a lane), skip that space.

If an enemy would appear on a space with only pikmin, they are now automatically “fighting” them, although they won’t do or take damage until the next move action.

PIKMIN TYPES

RED: Basic pikmin, carry strength of 1, immune to fire

BLUE: Basic pikmin, carry strength of 1, immune to water

YELLOW: Basic pikmin, carry strength of 1, immune to electricity, able to overcome height hazards

PURPLE: Advanced pikmin, carry strength of 5. No type immunities

WHITE: Advanced pikmin, carry strength of 1. Immune to poison. Does 1 damage to monster it is attacking if it is killed. If a treasure is only being carried by white Pikmin, it moves 2 spaces per action instead of 1. NOTE: This is not two actions, bitter spray cancels all movement.

BULBMIN (Green): Special pikmin, they can only be redeemed when defeating the bulbmin enemy. They are immune to elemental hazards, but not non-elemental ones.

They are immune to Fire, Water, Electric, Ice, Poison, and Control, but are unable to overcome heights, or stop themselves from being crushed or stabbed. Explosions also still affect them normally

ROCK (Black): Basic pikmin, only available on certain maps, Rock Pikmin cannot be crushed or stabbed

ICE (Cyan): Basic pikmin, only available on certain maps, Ice Pikmin are immune to the ice element (hazards and enemies)

WINGED (Pink): Winged pikmin can fly over hazards, but cannot pass Walls.

CO-OP MODE

If you are less interested in the competitive side of things, below are the rules for the more cooperative side of things.

CAPTAINS

In Co-Op mode only, each player takes a “Captain Card” randomly selected (unless the scenario says otherwise) that imparts a passive ability during the game.

Each ability can be activated as many times as the card stipulates, usually it applies in specific situations.

If a card creates a special token (Charlie, Rescue Corps) you start the game with that token on your HOME. (see CAPTAIN TOKENS below)

CAPTAIN TOKENS

Some captain abilities may create a special token, this token works like a pikmin (with some unique properties), and it can die, but if it DOES die it respawns at HOME during the beginning of the next “Move” phase.

Charlie Token - Strength 2 - No immunities

Oatchi Token - Strength 5 - Immune to all map hazards, ignores hazard icons on enemy cards (act as if it is a neutral/neutral) - Can ONLY damage enemies or walls, cannot move treasure
